AB - J09285483 A sanitary pad for toe crotches consisting of a nonwoven fabric blended with a drug ingredient(s). Cuts are formed in the fabric at intervals corresponding to the individual widths of the toes to form toe covers in strip form, and the opposite side without cuts is extended with an appropriate width without detachment of the toe crotch covers to form a sole cover.

- USE - The pad is used to prevent athlete's foot and keep clean and healthy skin.

- ADVANTAGE - The drug ingredient is typically sulphur having high antibacterial action and good skin care effects. The sulphur controls growth of athlete's foot bacteria, deodorises foot odour and controls pH and sebum of the skin. The fabric is typically composed with cellulose fibre and cotton, which has soft touch and a simple and clean wear feeling. The cuts are typically formed by punch ing.
